PROJECTS (SEE PORTFOLIO FOR MORE DETAILS)

A/B Experiment – Evaluation of New Traffic Sources

- Designed and executed A/B experiments with A/A validation.
- Conducted statistical analysis on conversion rates (t-tests, confidence intervals).
- Provided data-driven business recommendations.

End-to-End Project: Exploration, Modeling, and Insights

- Developed logistic regression and Random Forest models achieving an accuracy of 78 to 85%.
- Generated actionable insights for business decision-making.

Churn Prediction and Customer Segmentation

- Developed churn prediction models and customer clustering techniques.
- Achieved accuracy over 90% and identified high-risk customers.
- Supported customer retention strategies.

Match Analysis – Professional Match Report

- Automated pipeline using StatsBomb data (API).
- Created automated visualizations for xG analysis, passes, and pressure.
- Produced professional reports and dashboard layouts.

ACHIEVEMENTS

Churn project with over **90% accuracy** and identification of high-risk segments.

Predictive models with **78–85% accuracy** in classification (LR, Random Forest).

Developed **automated pipelines** for generating match reports with key **metrics visualization**.

Analyzed over **25,000 records**, resulting in **actionable insights**.

SUMMARY

Data Analyst experienced in Python, SQL, statistics, and machine learning, transforming data into actionable insights. I have developed end-to-end projects encompassing data cleaning, exploratory analysis (EDA), statistical modeling, A/B testing, and visualization. Focused on data-driven decision-making, KPI analysis, and clear communication of results to stakeholders. Currently pursuing a Master's Degree in Data Science.

TECH STACK

- **Languages and Programming:** Python (Pandas, NumPy, Matplotlib, SciPy, Scikit-learn), SQL (joins, subqueries, CTEs, aggregations), JavaScript, HTML
- **Data Analysis and Statistics:** EDA, data cleaning and transformation, feature engineering, A/B testing, statistical tests (t-test, chi-square, ANOVA), KPI analysis.
- **Machine Learning and NLP:** Classification and regression models, modeling pipelines, model evaluation (accuracy, recall, F1-score), NLP (tokenization, lemmatization, TF-IDF).
- **Visualization and Tools:** Tableau, advanced Excel, Google Sheets, Jupyter Notebook, Visual Studio Code, Git, GitHub.

EXPERIENCE

Audiobook Editor, Jarpa Studio.

📅 2020 - 2025

- Managed and validated large volumes of audio files using standardized processes.
- Quality validation using objective criteria.

Quality Control for Video Game Localization, Keywords Studio.

📅 2021 - 2022

- Applied consistent evaluation criteria, conducted comparative analysis, and documented findings.
